

Biology is All Around Us.

Biology is indeed all around us. Not only is it at the park and the lake, but it is also on the walk/drive to school, it is in the food we eat, it results in many of the products we use as well as many of the technology that makes our lives easier and more pleasant. Can YOU apply the biology you've learned to identify the Biology around you?

Find the Biology around you and take a clear picture (or two) of your observation:

- Make sure that you are in the picture to verify that you were there.
- Make sure the picture is clear enough to identify the biology (you may take 2 pictures, a close up and a far away if necessary).
- Use the *Georgia Performance Standards* to identify which Standard (Number) and Element (letter) your observation applies.
- Identify the date, place and organism for your picture (pictures should be taken _____)
- Explain the connection between your picture and the *GPS*

GPS:

Name: _____

Picture of You Observing the Biology:

Place Taken: _____

Date Taken: _____

Organism(s) Involved (Common Name
Required, Scientific name Extra Credit)

Brief description of how the picture is an example of the Georgia Performance Standard
